

**SIDE DISCHARGE BAG FOR FLOWABLE MATERIALS AND**

**METHOD FOR DICHARGING FLOWABLE MATERIALS**

**ABSTRACT:**

A discharge bag for flowable materials is disclosed, having a side discharge spout near the bottom of the bag, allowing for discharge without the requirement for the bag to be hoisted by a forklift or other means, for discharging the materials contained within. The side discharge bag can be conveniently used with a frame assembly that further facilitates the discharge of flowable materials stored in the bag.
